How to Get Tested

1. Patient signs consent on Cancer Genetics Test Request Form.
2. Patient prepays for BraOVO test package, including genetic counselling at gdpay.com.au and records receipt number on request form.
3. Patient attends nearest Healius Pathology collection centre for blood collection with signed test request form.
4. Genetic counsellor contacts patient and pre-test counselling occurs.
5. Testing occurs and report issued.
6. Post-test genetic counselling occurs including provision and discussion of results.
7. Summary letter sent back to referring general practitioner and patient.

Package payment is required prior to counselling and testing proceeding - see below.

Payment Information

Your test is NOT covered by Medicare:

- Full payment for package for testing and counselling is required prior to blood collection.
- Visit gdpay.com.au to pay or scan QR code.
- Call 1800 822 999 (Mon-Fri 0800 - 1800 EST) with any queries.

QR Pay

Amount Paid:

Collection Information

Collect 2 x 6mL or 10mL EDTA tube at 10 minute intervals.

PERSON COLLECTING SPECIMEN TO COMPLETE:

I certify I established the identity of the patient named on this request, collected and immediately labelled the accompanying specimen with the patient's details.

Initials: ACC Code / Location:

Date of draw: Time: : am / pm

Cancer Genetics Request Form - GP Only (non MBS)

Patient Information

Introduction

- The information included on this page describes the process of undergoing genetic testing for hereditary breast and ovarian cancer.
- Genetic counselling is required by the laboratory's national accreditation body for all hereditary breast and ovarian cancer genetic testing.
- It is classified as a complex genetic test because the results can have important medical, psychological and social implications for you and your family.
- This counselling can be provided by a genetic counsellor or a specialist. As your request has come from a GP, we will work with our genetic counselling partner to provide that counselling for you.
- Read this information carefully before making your decision to undergo genetic counselling and testing. Further information is available at genomicdiagnostics.com.au.

Purpose

- The purpose of the BraOVO genetic test is to determine whether you have an inherited (passed from parent to child) susceptibility, or increased risk, for breast and ovarian cancer.
- The BraOVO test looks for pathogenic variants (harmful changes) in a panel of genes, including BRCA1 and BRCA2, that are associated with increased cancer risk. The genes included in the panel are mainly associated with breast and ovarian cancer, but can also increase your risk for other cancers.
- Results from the BraOVO test can be used in diagnostic (when you have cancer) and predictive (before cancer occurs) settings. Awareness of inherited cancer risk can alter your immediate and longer term medical care. Your result can also have important implications for other family members as they may have inherited the same harmful gene change.

Genetic Counselling

- Pre- and post-test counselling sessions are a mandatory requirement as part of the BraOVO test package requested by your GP.
- Pre-test genetic counselling involves discussing the benefits, limitations and possible outcomes of the BraOVO test. This consultation considers your personal and family history of cancer and will assist you in making an informed decision as to whether this test is right for you. If after your pre-test counselling session you choose not to proceed with the BraOVO test, you can cancel your testing (a fee will be incurred).
- A post-test counselling session will occur approximately 4 weeks after your pre-test session. In the post-test session your BraOVO test result will be provided to you along with information on what the result means for you and your family.
- Pre- and post-test counselling sessions are provided by our fully qualified, experienced genetic counsellors in a telehealth setting.

- A summary letter of both counselling sessions will be sent to both your GP and yourself following completion.

Privacy

- We keep your test results confidential.
- Your results will only be released to your requesting healthcare provider, your genetic counsellor, and to another healthcare provider if directed by you.

Use of Information & Leftover Specimen

- In accordance with best practices and clinical laboratory standards, leftover de-identified genetic and other information learned from your testing may be used by Genomic Diagnostics for purposes of quality control, laboratory operations, laboratory test development and laboratory improvement. All such uses will be in compliance with applicable law.

Note

- If your BraOVO test does not identify any pathogenic variants, this does not mean you will not get cancer, as there are many other factors that contribute to cancer risk. It also does not rule out pathogenic variants in other genes for which you have not been tested.
- Full terms and conditions regarding payment and refunds are available on our website. Please visit genomicdiagnostics.com.au.
